

KD03c VPN

VPN Concentrators

KD03c VPN is a line of high security products designed for the protection of IP traffic of LAN and WAN networks, no matter the content of the IP packets, whether data, audio or video, which are being transferred.

KD03c VPN equipment satisfy the requirements of secure remote access of TSMc R2 mobile terminals, Cryptophone T2c fixed terminals and laptop PCs equipped with KD03c TST token to the corporate network, allowing interoperability of mobile and fixed terminals as well as the availability of services provisioned by the network.

Telsy VPN concentrators characteristic is the establishment of end-to-end encrypted tunnels to secure site-to-site and remote access connexions. Flexibility, scalability and ease of use are the main advantages, which organizations can gain from the use of such systems. Security policies and configuration parameters are prepared by the management system and delivered to the units in the network.

KD03c VPN concentrators are available in different models according to network bandwidth requirements.

The IP data flow is protected by strong Telsy proprietary encryption mechanisms.
