

# TSMc R2

## **Secure Smartphone Terminal**

Mobile security solution based on SAMSUNG\* smartphones for the protection of voice and data communications over IP cellular networks.

TSMc R2 combines security features with technology performances of the latest generation mobile phones in a single terminal of reduced dimensions and weight. Besides the standard functions of the most sophisticated mobile telephones, TSMc R2 ensures good voice quality even in secure communication mode.

Featuring a removable internal security token based on a MicroSD, for the storage of algorithms and sensitive data, TSMc R2 implements enhanced security mechanisms to guarantee the separation of security services and mobile applications.

The generation and distribution of the security parameters as well as the unit configuration files are tasks completed by the Management Center.

\*Other models based on Samsung S5 and Fairphone2 are on delivery phase.
