

# TelsySkills

Cyber Professional Services  
Cyber Awareness & Training

An individual's activities, in their interaction with the web, can put their security at risk, as well as that of the organisation of which they are a part and the entire supply chain. Traditional training techniques have shown clear limitations in their effectiveness. TelsySkills is a unique and effective proposal to counter cybercrime, focusing on the human factor as the key to success.

## It turns employees into the front line against cybercrime

TelsySkills increases employee awareness by adopting the most advanced learning techniques. The platform consists of three modules, at the end of which a certificate of completion will be awarded:

### Awareness

A dynamic, stimulating and interactive learning path to make employees more aware of web tools.

### Channel

A series of short videos on cyber risks with innovative, engaging and immersive storytelling.

### Phishing

Experiential training with simulated phishing, smishing and vishing campaigns.

A module to customise and schedule continuous and realistic training. Thanks to AI, the platform processes a gradual increase in the difficulty of attacks.

## Why TelsySkills?

- *Raises awareness of cyber risks*
- *Interactive approach and pervasive gamification*
- *Fully automated and low operational impact for HR, IT and security functions*
- *Short, self-contained sessions*
