

TelsyATMO

Communication Security

During business meetings, we are often exposed to the risk of eavesdropping aimed at espionage or information theft. In this scenario, all mobile digital devices such as smartphones and smartwatches are potential vulnerability vectors. They offer dangerous gateways for malicious attackers, given the impossibility of knowing if and when hostile software is using the microphone.

Security for your conversations

TelsyATMO is an ultrasonic audio jammer that inhibits the recording of voice conversations by malicious applications on hacked smartphones and mobile devices.

The system prevents any conversation held in the presence of mobile devices, contained within the TelsyATMO facility, from being unwittingly overheard by potential eavesdroppers or malicious actors.

Why **Telsy**ATMO?

- **Communications are protected** from external intrusion
- *Extremely easy and **intuitive to use***
- **Multiple features** for everyday needs
- *Reliability, elegance and **quality from Telsy***
- **On-off charging** avoids overheating
- **High efficiency** and low cost
