

TelsyIncident Response

Direct contact with cyber experts for the best response to cyber incidents

Several cyber incidents are experienced by companies every day with the consequential waste of time and money, and this trend is steadily increasing. TelsyIncidentResponse is the cyber line service created to provide immediate support to restore business continuity in case of a data breach or cyber incident.

Instant response support for cyber incidents

In the modern corporate scene, the attack surface availability to cyber criminals has expanded, due to the increasing adoption of digital solutions. Under these conditions, a proactive approach is no longer enough; security incidents can occur in even the most secured facilities, so a “**reactive**” response dedicated division is critical.

TelsyIncidentResponse was created to provide **24/7** operational and forensic support to organisations and to guide them step-by-step through the Incident Response process stages.

By dialling **+39 02 2022 8700** and entering the pin 1971, the user can directly contact Telsy's iSOC experts to receive preliminary assistance and identify the most appropriate countermeasures to restore services impacted by the incident.

Why TelsyIncidentResponse?

- **Instant support**
- **24/7 Service**
- **Direct line contact**
- **Telsy iSOC cyber expert team**
