

TelsyMobile Defender

Mobile control and defense
in a single platform

Smartphones are becoming an indispensable tool for businesses, which expands the perimeter to be defended and the risks to be prevented to avoid damage. The cloud solution TelsyMobileDefender provides all the tools needed to manage, monitor and protect Android and iOS devices from data theft and cyber intrusions.

Two needs in one solution

TelsyMobileDefender is an innovative and complete solution that ensures the monitoring and security of mobile devices which consists of an Endpoint Management system and a **Threat Defense** module (MTD) integrated with Telsy's SIEM and SOC.

A web dashboard enables granular and efficient governance of the device fleet and the prevention of any inappropriate use.

Through a single administration panel is possible to uniformly manage apps, APKs, file resources, certificates, notifications, settings updates, and upgrades, ensuring smooth and optimal throughout for your entire fleet.

The platform also enables the monitoring of all events that could lead to possible system security issues by breaking them down by criticality.

Why TelsyMobileDefender

- **Complete Solution:** Endpoint Management + Mobile Threat Defense
- **Total and certified mobile security** (Android Enterprise, Samsung Knox, Apple Consultants Network)
- **Ease of configuration and use**
- **Protection** from known threats (Trojans and Ransomware) and unknown threats (Zero Day Malware)
