

VIP Digital Protection

Intelligence

In an increasingly digitised environment, where the internet is now required to carry out the many activities that involve us, we are more exposed to many diversified and interconnected risk scenarios, not only as digital subjects but also as physical subjects.

Cyberspace is a complex ecosystem, and the increasing availability of data represents both an asset and a source of risk, especially if personal and sensitive data are carelessly left on public domain sites.

Preventing and monitoring risk exposure

Telsy's **VIP Digital Protection** service is a set of insights extracted by applying specially developed methodologies to assess the cyber, physical and reputational risk profiles to which one might be exposed.

Thanks to the TelsyOlimpo Decision Intelligence platform, our analysts carry out qualitative and quantitative risk assessments, providing a comprehensive overview of all data that a threat actor could exploit to cause harm to people.

The ultimate aim is to provide the individual involved with all the tools and guidance to enable them to choose whether to implement any countermeasures to nullify or mitigate the variety of exposure profiles

Why VIP Digital Protection

- **Prevention and monitoring** of personal risk related to exposed sensitive data
- Modern AI techniques and specialised analysts dedicated to **insight organisation and customised reporting**
- **Unified decision-making dashboard** for overall assessment of risk exposure

 **Telsy**
