TelsySecureRouter & Plug-in
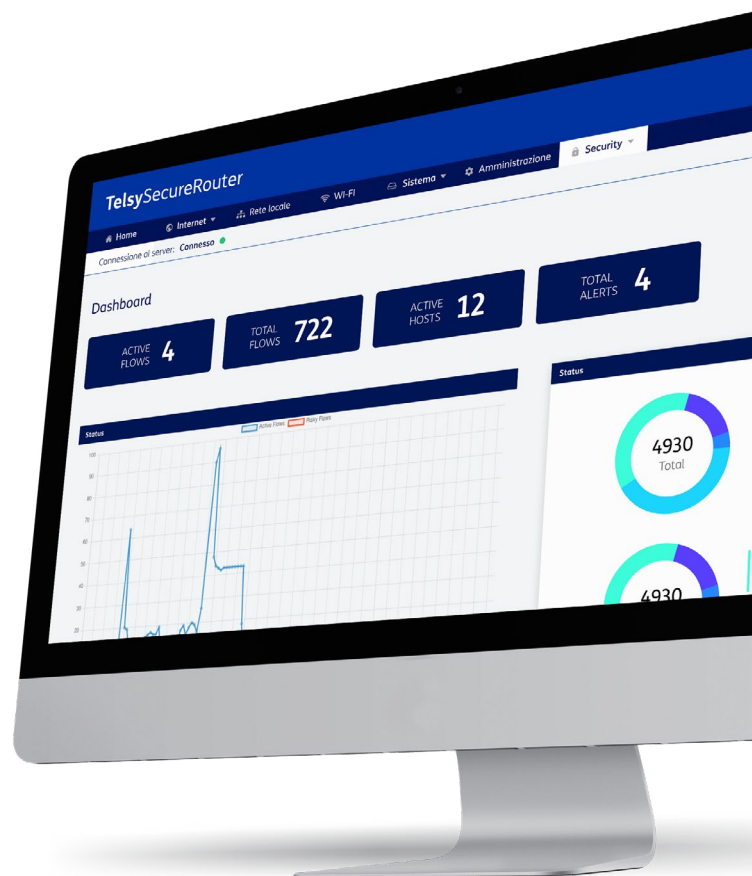

Security, an essential part of online protection, directly inside the network access system

![Telsy — A TIM ENTERPRISE BRAND]

Network security is essential for a company to function correctly and efficiently. The solution, designed for small and medium-sized local networks, ensures global traffic analysis (in/out) without introducing significant changes to the existing network and without the need for technical knowledge from the user.

Security starts at the router

The chosen networking system is the Tiesse Imola 6 router, equipped with specific firmware capable of analysing incoming and outgoing traffic.

It implements containment policies when the risk – calculated by complex indicators from threat intelligence systems – exceeds predefined security thresholds.

Main features:

- Local network status monitoring and anomaly detection;

- Automatic blocking of high-risk connections;

- Automatic synchronous and/or asynchronous notifications according to the level of risk of the detected event;

- Working time operative specialist assistance from the dedicated Telsy Security Operations Center.

TelsySecurePlug-in

An all-in-one solution designed to be combined with any getway, it provides automatic configuration an APP for the latest generation **TIM HUBs (Zte and Technicolor).**

Why **Telsy**SecureRouter & Plug-in

- *Real-time global monitoring of the entire internal network and its connected devices*

- *Constant checking of 'connection status' for the detection of malicious activity*

- *Response: automatic blocking of high-risk connections*

- *Automatic notification to the user of traffic detection associated with medium-high and high-risk thresholds*
