

# TelsyATMO

Communication Security

During business meetings, we are often exposed to the risk of eavesdropping with the purpose of espionage or information theft. In this scenario, all mobile digital devices such as smartphones and smartwatches are potential attack vectors. They can be exploited as gateways by attackers, that can access the device microphone and record conversations remaining undetected.

## Security for your conversations

**TelsyATMO** is an ultrasonic audio jammer that inhibits the recording of voice conversations by malicious applications on hacked smartphones and mobile devices.

The system does not block mobile carrier signal of devices located inside **TelsyATMO**, allowing the device to receive messages and calls. The frequency emitted by **TelsyATMO** does not allow the microphone of the device placed inside to record any sound.

The transparent design of **TelsyATMO** allows also for immediate device notification access.

## Why **TelsyATMO**?

- **Protects conversations** from unwanted eavesdropping
- **Extremely easy and intuitive to use**
- **Telsy quality, reliability and elegance**
- **On-off wireless charging** to prevent overheating
